Congratulations on The Purchase of Your New "State of The Art Shower Enclosure!"

New Images, Inc. is devoted to making your new shower unit as enjoyable as possible. Therefore, we ask that you follow these simple preventative maintenance tips:

- Please allow **at least 24 hours** for the silicone sealant to cure (dry) before your first shower, as this can prevent premature water leakage.
- We recommend that you "squeegee" your glass panels as often as possible (preferably right after showering) to prevent streaks and soap build up. (Squeegee's are sold in our showroom)
- An occasional towel drying of the vinyl seals can also prevent mildew build up.
- The glass should be cleaned at least once per week with the industrial glass cleaner provided by your installer. Regular glass cleaners, such as windex, are not recommended because they tend to leave streaks on the glass. (Additional cans of industrial glass cleaner is sold in our showroom)
- The bottom sweep on the door should be replaced about once a year, depending on normal "wear and tear".
- The screws on the inside of your shower door hinges (if applicable) should be hand tightened with a #4 screw driver at least once a year.

Please follow these simple tips to keep your shower unit as maintenance free as possible.
Please feel free to call us with any question or concerns.

Thank You for Choosing New Images, Inc.
